Guideline 4Cast

The profile will assist in easy load of the rod, superb line control and a slightly delayed and very accurate turnover through the smooth tip. This, combined with a strong handling line tapered into a low friction, low diameter runningline will set you up for long casts and pin point presentations alike. A very good choice for the allround flyfisher who wants a line that performs equally well with overhead- and spey casts at a reasonable price. Integrated front loop.
